GFT among Europe's leaders for data analytics and machine learning in the Google Cloud

GFT has been identified as a leader in ISG's Provider Lens™ evaluation for Europe – Google Cloud Partner ecosystem data analytics and machine learning 2022

Stuttgart, 21 July – **Artificial intelligence** could contribute close to USD [16 trillion to the global economy in 2030^{1\)}](#). Successfully implementing AI solutions has become **key for the continued competitiveness** of companies in all industries.

The analyst firm **ISG recognises GFT as a leader** in Europe **for data analytics and machine learning** in the Google Cloud Partner Ecosystem in their first-ever ISG Provider Lens™ report on the subject. Leaders as defined by ISG have a broad, attractive portfolio of products and services, a well-established market presence and strong competitive position.

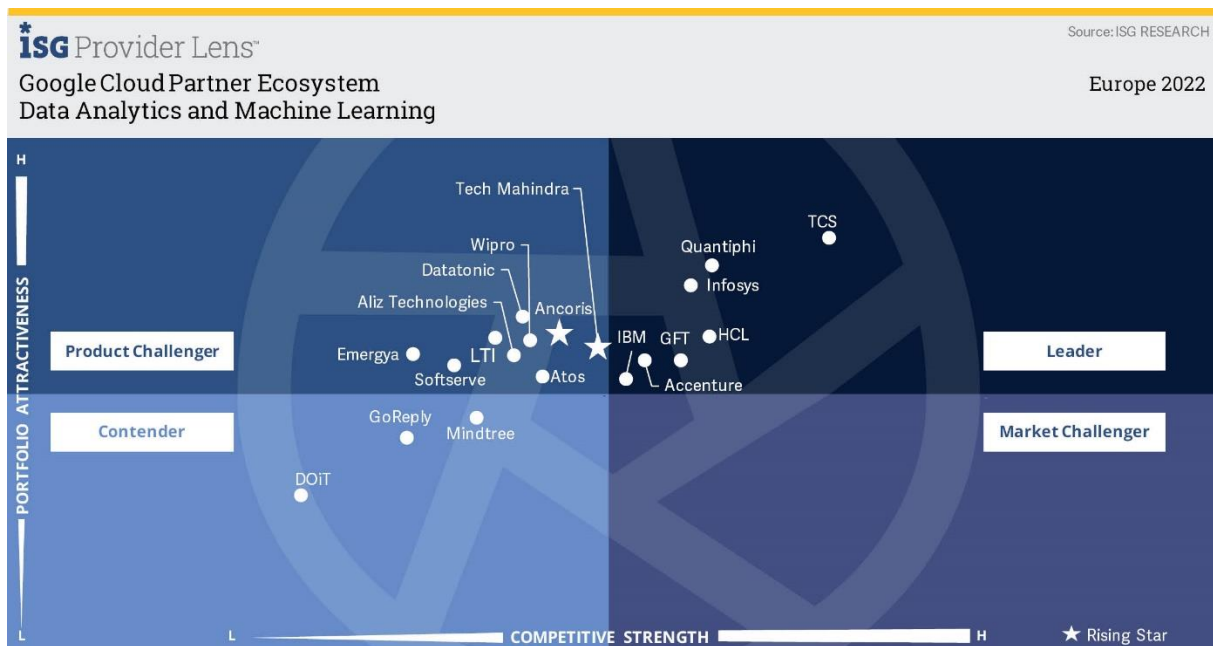

When employed correctly, **artificial intelligence** can give companies of all industries a **competitive advantage**. It **boosts** their **productivity** and improves overall **reliability**. Companies who apply AI to the heart of their business significantly enhance their ability to make decisions faster, smarter and with greater precision. The **Google Cloud Platform** gives users **quick and easy access** to the latest AI technologies while avoiding huge hardware investments. Still, going it alone is not an option: To get optimum results out of their Google Cloud AI applications, **companies need an experienced partner**. Analyst reports like the most recent one from ISG now make it easier to find the right partner with the specialist skills to create valuable business outcomes.

“Strong visual inspection capabilities make GFT a leader on data analytics and machine learning in the Google Cloud Partner ecosystem,” said Mark Purdy, principal analyst and author of the ISG report. Alpesh Tailor, Executive Director of the Global Cloud Business Unit at GFT added: “We have helped our clients significantly boost both the quality and productivity of their processes using AI solutions on Google Cloud. We have done this in all industries, from financial services to manufacturing, and not just in Europe, but in North and South America as well.”

The report highlights **GFT's strong expertise in computer vision technologies**. The company is listed as one of four global service providers for GCP's Visual Inspection AI and, as the analyst firm put it, “offers a range of advanced visual inspection tools for manufacturing processes,” including

- process monitoring
- use of vision AI to identify product defects
- in-line quality forecasting
- analysis of final packaging video streams

Another GFT strength mentioned in the ISG report is the company's **industry traction**. The report points out that the company has carried out “data modernisation and analytics projects for blue-chip clients **in Europe and beyond**.” GFT has successfully implemented Google Cloud AI solutions for clients in various industries – including a US-based maker of baked goods and the leading bottle manufacturer and one of the largest American automobile manufacturers.

ISG's Provider Lens™ report “Google Cloud Partner Ecosystem Data Analytics and Machine Learning” recognises GFT as a leader in that field.
