

GFT launches new AI platform accelerating enterprise-wide digitization for financial institutions

Collaboration with Google Cloud and computing power of the cloud fuels real-time analytics platform for financial institutions and mortgage lenders

NEW YORK, September 12, 2018 – [GFT](#), global IT engineering and technology specialists for the financial services industry for over 30 years – and Google Cloud services partner, has announced the launch of their [GFT Streaming Enterprise Analytics Platform \(SEAP\)](#) solution powered by Google Cloud. GFT introduced the solution in July at Google Cloud Next '18 in San Francisco, alongside other industry innovators.

SEAP provides real-time data ingestion and processing to support the consumption of actionable insights. With the ability to ingest any type of unstructured data, in a streaming format, the platform enables inflow analytics through use of AI and machine learning technology. Powered by Google Cloud technology, the on-premise design utilizes the latest big data streaming technology and can migrate readily for a cloud implementation.

[Craig Parfitt, GFT Head of Engineering and Artificial Intelligence](#) said, “Data is the foundation of a truly digital experience therefore Big Data, Cloud, Open Source and ML/AI technologies all form the enterprise data platform of the future. Drawing on these capabilities, SEAP is able to conduct real-time, enterprise-wide data ingestion and analysis by extracting intelligence from previously inaccessible data sources to produce a valuable level of insight.”

Financial institutions continue to undertake digital transformation initiatives though enterprise-wide solutions have proven difficult to implement. AI plays a vital role in the financial services industry where automating business processes means greater efficiency, productivity, and insight. GFT's innovative and custom built solutions are developed from extensive industry expertise and a deep understanding of financial technology systems with leading global banks.
