Get started with Migrating Murex MX.3

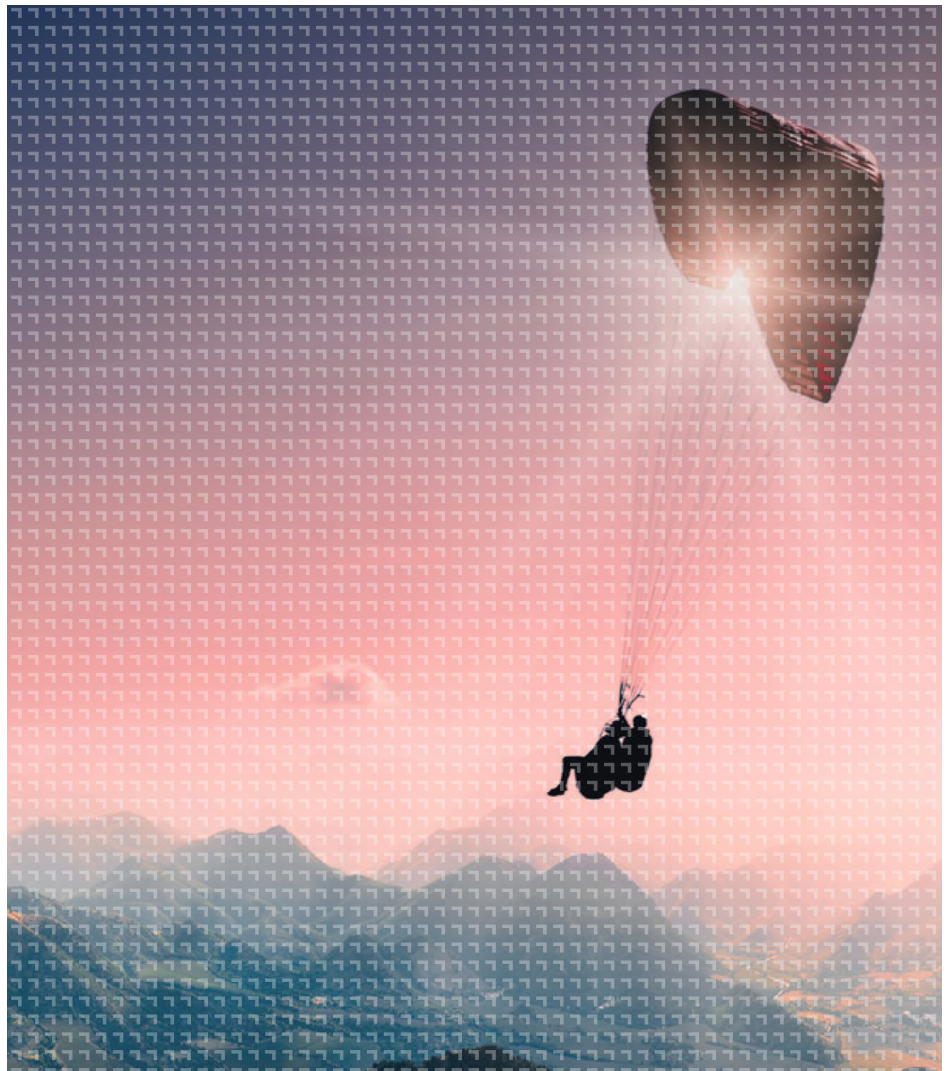

Delivering cloud execution excellence with GFT

Why migrate to the cloud now?

The pressure on technology is to adapt and actively support agility innovation and growth. Although cloud migration has been on the agenda of financial institutions, many companies have trailed behind other sectors when it comes to porting their core legacy business applications to the cloud, this where GFT's experience of delivery can help and also our position as a Murex Integrator.

Moving from legacy on-premise trading platform infrastructures to a cloud providers leading edge cloud-driven solution can be a complex journey, but we at GFT are able to lead the way for a successful undertaking, the result will be a transformed organisation that's primed for growth.

Migrate with Murex MX.3

GFT works with our cloud partners, including Amazon Web Services (AWS), Azure & Google Cloud to ensure financial institutions can successfully run Murex MX.3 in the cloud, redefining to allow faster innovation and thus fully agile in the development of new products, services and business operations.

By migrating to the cloud we strongly believe customers will benefit from greater business agility, with better performance from unlimited horizontal scalability, clean and efficient environment management using infrastructure-as-code and a lower total cost of ownership. GFT offers improvements for both business users and development teams.

The benefits of migrating to Murex MX.3

- Enhanced EOD batch processing
- HPC (High performance Computing) Scalability for risk analytics engines
- Fast deployment of computationally intensive interfaces
- Reduced cost for always-on infrastructure environments
- Production like development environments and fired up only when needed and at mass
- Effective implementation of CI/CD pipelines
- Good infrastructure sizing – Never over or under provisioning infrastructure

The scalability, agility, and level of innovation offered now by the cloud makes it an essential enabler for future business transformation and success. The cloud is not only a IT delivery method, it's a technological leap into a new environment that will move you from the status quo into a world of business innovation.

Whilst moving from legacy on premise trading platform infrastructures to a leading edge cloud-driven solution such as Murex can be a complex journey, we at GFT are able to lead the way for a successful undertaking, the result will be a transformed organisation that's primed for growth.

Why migrate with GFT?

At GFT, we provide a clear cloud framework journey roadmap and built best practices for deployment in close partnerships the likes of AWS, Azure & Google Cloud. We have reliable communication channels with these partners for leading client support. We have a specialist Cloud Security team ensuring all financial data is safely secured to the best practices.

Our cloud migration service helps clients to move on-premise to the cloud smoothly and quickly covering both initial exploration and migration. We have large contingent cloud focussed teams that combine with our Murex practices to offer the unique skills and experiences required to run an efficient cloud project.
